What's new in XProtect Professional VMS Products 2016 R2

XProtect® Smart Client – now available in simplified mode

Continuing on the path of making our products easy-to-use, a simplified mode in XProtect Smart Client addresses the needs of occasional system users. Now users can choose to run XProtect Smart Client in a simplified mode, which has only the most common and basic video functionalities. Users can toggle between the simplified and advanced modes and the client will automatically start with the last mode used.

XProtect Smart Client is one of the three Milestone viewing clients along with XProtect® Web Client and Milestone Mobile, which provide powerful control of any Milestone installation. The new simplified mode in XProtect Smart Client provides an easy-to-use experience so users can quickly perform their task and move on.

Ease-of-use features

A new range of automatic management features in the software make it easy to effortlessly configure and maintain Milestone installations.

- In addition to the existing automatic camera discovery, the new automatic IP address assignment*, makes finding, adding and assigning IP addresses to cameras easier than ever. Now the VMS automatically finds and assigns IP addresses to all connected IP devices on the network, saving time and effort when setting up cameras
- Through automatic time synchronization* cameras that are discovered automatically are configured to synchronize with a time server. Time synchronization across the connected devices ensures that all video is recorded with similar time stamps for accurate incident investigation and evidence collection
- Using automatic storage distribution, the VMS optimizes disk storage by intelligently spreading out video data across the different drives in the system, reducing the effort and time of system installation

XProtect Professional supports unlimited cameras**

Previously, XProtect Professional supported up to 64 cameras per server but with the release of XProtect Professional 2016, users can connect an unlimited number of cameras per server, making it the ideal software solution for multi-site installations.

*On supported devices only, please refer to: <https://www.milestonesys.com/solution-partners/supported-hardware/>
**For most installations larger than 250 cameras, Milestone recommends XProtect Corporate or XProtect Expert
